Abstract

A character communication device which is connected to a network and enables at least communication by using characters. The device comprises a candidate term display means (S104) for displaying a group of candidate terms prepared for message communication in a candidate term display area (52) of the screen, a term selecting means (2b) for outputting a term which is selected by the operator from the group of candidate terms, and a message generating means (S108) for generating a message by serially displaying a plurality of outputted terms in a message editing area (53) of the screen and sending the generated message to a transmitting/receiving means.
